

THE WAITLIST BRIEF

Editing, minus the **busywork**.

EditHive is the AI post-production suite that finds your best takes,
knows every track you own, and remembers where everything lives.
Right inside Premiere Pro and DaVinci Resolve.

macOS · Apple Silicon & Intel

Free during beta

Runs on your machine

WHY EDITHIVE EXISTS

Built by an editor who got tired of the headaches.

I have been cutting professionally for seven years. Weddings, commercials, documentaries, brand work. And for seven years the same things kept stealing my nights: scrubbing hours of footage for selects, hunting for a track I knew I owned, digging through five drives for one transition, re-explaining old projects to myself.

EditHive is the suite I kept wishing existed. Not another tool to learn, a teammate that handles the grunt work so the hours you spend editing are the hours that actually need you. Every feature exists because the headache it removes is one I have personally had.

The name says it plainly: a smarter way to select everything. Your shots, your music, your assets, your references. *Selected smart.*

Benny

Founder, EditHive

ONE SUITE. EVERY PART OF THE EDIT.

Six headaches, turned into features.

Smart Select

Point it at a folder, an XML, or your open timeline. It trims the dead weight inside every take and returns four ranked timelines: primary selects, alternates, smart groups and the residual it cut. Nothing is lost, everything is ranked.

Sync

Multicam and dual system audio, matched automatically. Every take aligned before you touch the timeline.

Sound

Your music library, searchable like a streaming app. Tempo, key and mood are read from the audio itself, even tracks you downloaded years ago. Audition without leaving your editor.

Asset Library

Every transition, preset, LUT, SFX and template indexed into one search bar. Send an asset to your timeline and it lands in your editor and the project folder at once. Duplicates caught automatically.

Soundbites

Feed it a transcript and the strongest pulls come back grouped: hooks, quotes, emotional moments, story reveals. Click a card and your playhead jumps straight there.

Project Memory

Footage, music, references, exports and deliverables gathered per project, with a one click archive you can hand off or shelve and reopen a year later.

Also inside: **Inspiration**, a reference library that remembers why you saved it.

WHERE IT LIVES

Inside Premiere and Resolve, not beside them.

EditHive runs as a panel inside Adobe Premiere Pro and as a Workflow Integration in DaVinci Resolve Studio, with a connector that carries a timeline from Premiere to Resolve in one click. Hit **Find my selects** and the results land in your open project.

A promise that matters

EditHive **never moves, copies, renames or modifies your files**. It builds an index that points back to where everything already lives. Analysis runs on your machine, and nothing about your footage is uploaded to train somebody else's model. Your folder structure stays exactly as you left it.

What happens next

01

Invites go out in waves, starting with the first 100 editors on the waitlist. Editors who answer the 60 second survey at myedithive.com/survey are first in line.

02

Your invite carries your key. One key unlocks the downloads page and activates the app. Keep it private, it is yours.

03

You get a direct line to the team. What you report in the first weeks decides what EditHive becomes.
